[ARCHERS]

75 Cuts, wounds, and sores are treated by rubbing the medicine, prepared with water or oil, into the wound. To cure headaches, rheumatism, and mental and other disorders, the skin may be scarified with an arrow and an herb rubbed into the wound. An effective though painful remedy against frambesia is widespread among the Mbuti. Mbuti and villagers both claim that it not only cures but prevents any recurrence of the affliction: Two species of vine are used, or, if the frambesia is malignant, a decoction is made with water and the earth of the nest of the ant (*ti'i*).

The Mbuti claim to know how to reduce fractures, says Schebesta.

Dysentery, diarrhea, and constipation are treated by enemas prepared from various lianas, barks, and peppers.

Various leaves and plants are applied or rubbed externally, without any scarification, against headache and stomach-ache, or inserted into tooth cavities.

• 759 Schebesta says that he has encountered no evidence of specialization in the field of medi-
75 cine. There never seems to be any need for one
628 band to apply for help or advice from another,

ation camp. While some started erecting the hut, in the style of a bent-over windshield, others prepared a horizontal cross bar between two trees. Five boys were circumcised the first day, and three on separate days during the second week of the *nkumbi*. Not all were cut on the cross bar. Some were taken down to a stream. One was circumcised in the middle of the village; another, in a different place within the initiation camp. The cutting was done to the accompaniment of much drumming, while all the womenfolk of the village were shut up in their huts. No signal was given to indicate when a boy had been cut, though probably the change in the vigor of the drumming and *makata* beating served to notify the women. Only one boy was given a *segbe* pipe to blow, by a particularly superstitious father. The "doctor" wore a mask made of a thin strip of bark (Fig. 48a) and raffia armbands (Fig. 47a) which were thereafter left hanging from the roof of the initiation hut.

After the circumcision, the wounds were dressed, and the boys immediately were made to begin to learn the initiation songs. Far from

Mrs. Putnam mentions a villager chief who called in a Pygmy "doctor" who made an incision in the chief's knee from which he withdrew antelope bones and some bugs. Putnam (1948, 340), as does Schebesta (1941, 236), mentions Pygmies' going to villager doctors for treatment of ailments for which the Pygmies have no remedy. This is the only instance quoted of the reverse process, and the only mention of any Pygmy specialist. No further details are known as to how and where the Pygmy acquired his art and reputation.

The villagers recognize the Mbuti knowledge of forest lore. There is one incident known among the net hunters of Pygmies' being called to treat a village girl bitten by a Gaboon viper. The venom of this snake is both hemotoxic and neurotoxic and is normally fatal. The girl was bitten in the face, which was swollen like a balloon by the time she was treated. She was cured quickly and completely. Details of the snake-bite antidotes of these Mbuti are not known.

Rationalization

As in the parallel section for the archers, speculation on problems of life and death are considered under Religious Life (p. 235). A word of warning, however, should be offered. Mimicry is a widely attested Mbuti practice. Their great ability in the art is equally well confirmed on all sides. They are equally able to imitate speech as well as action and, with true
